THE

BĀZ-NĀMA-YI NĀSIRĪ

A Persian Treatise on Falconry

TRANSLATED BY

LIEUT.-COLONEL D. C. PHILLOTT

This interesting book, with its curious admixture of Oriental fatalism and shrewd bird-craft, will form one of the most interesting contributions to the literature of Falconry. It should be read by every English falconer.

The edition consists of 500 copies.

"We offer Dr. Braithwaite our most sincere congratulations on the completion of this work on his favourite class of plants. Begun, as regards publication, in 1880, it reached completion by the issue of the last part with index and supplement in May of this year, so that the course of publication has occupied a space of some quarter of a century. . . .

"The three volumes of Dr. Braithwaite's book are illustrated by 128 pages of plates, giving figures of every moss described, with enlarged designs of parts of the various species. Every one of these plates has been engraved from the drawings of the author himself, and together constitute a remarkable monument of his skill and industry. Indeed, the illustrations may be regarded as perhaps the most distinctive feature of the work. In some cases a whole page is devoted to a single species, as *Schistostega*, or to two species, as in the strange genus *Buxbaumia*; but generally four or more plants are dealt with in a single plate. So far as we have compared the figures of our author with nature, we have found his drawings accurate, and the magnified parts very valuable for the purposes of identification. . . .

"Mr. Dixon, in his preface to his 'Student's Handbook of British Mosses' (1896), referred to the book now under review as 'Braithwaite's splendid and elaborate work . . . which has done so much to stimulate the study of these plants in our country and which will doubtless remain our standard work for many years to come.' In this generous appreciation by one botanist of the work of another, we cordially agree, and we rejoice for ourselves, as well as for the author, at the completion of a noble piece of honest work." . . . *Nature*, Aug. 31st, 1905.

Sm. 8vo., 48 ll., with woodcut initials, 1 full-page woodcut (repeated), 2 half-page woodcuts, and having on the reverse of the last leaf the French arms; red morocco extra Paris, Lotrian, about 1515 9 9 0

According to *La Croix du Maine* the writer of this extremely rare piece was Dany or Davy (i.e. David) Brossard, priest of the Abbey of St. Vincent, near Le Mans. The woodcuts represent gardeners grafting, etc. Brunet records only the Lyons reprint and the much later issues of Paris, 1552 and 1560. The latter forming a portion of the collection by Gorgole de Corne, *Quatre Traictes . . . de l'Agriculture* . . . It was the original of the well-known book by Leonard Mascall—*A Booke of the Arte and Maner, how to plant and graffe all Sortes of Trees, how to set Stones and sove Pepines* . . . 1572.

| Extremely rare, especially the sixth volume. Neither my catalogues of 1874 onwards, with one exception, nor the leading auction sale catalogues from 1887 to the present time contain any mention of a copy. In consequence of its rarity the work was reprinted, but with unsatisfactory results, the poor reproductions of the many thousands of fine lines rendering the reprinted plates of little value. | | | | |

Sm. 4to., Black Letter; a large and fine copy in old calf (neatly
repaired) 1541 9 0 0
A desirable copy of an early edition of a famous book, written by a layman, in
English, to the annoyance of the medical profession. It is in the preface to this edition
that the author replies to his critics. Lowndes mentions an edition of [1533] although,
according to the *Dict. of Nat. Biog.*, no copy is known now.

"So large is the proportion of Mosses, Hepaticæ, Sea-weeds and
Lichens, brought home by the Antarctic Expedition, as compared with
the phænogamic plants, and they contain so much of interest
and novelty, that, at the request of several able cryptogamic
botanists, I have been induced to prepare a few copies illustrative of
these tribes, unconnected with the entire *Flora of the Antarctic
Regions.*"—*Introduction.*

The *Flora of British India* comprises brief descriptions, ordinal, generic, and specific, of the flowering plants and ferns found within the British territories in India, together with those of Kashmir and Western Tibet.

"The 'Flora of British India' is a work to which Sir J. D. Hooker has devoted many years of his life, and it is chiefly written by him, portions having been contributed by other botanists, amongst whom are Mr. Thistleton-Dyer, Mr. C. B. Clarke, Dr. Maxwell T. Masters, Mr. J. G. Baker, and the late Dr. T. Thomson and Dr. T. Anderson. The undertaking may be said to have commenced originally by the publication of the first (and only) volume of Hooker and Thomson's 'Flora Indica' in 1855; but the present work, which is on a smaller plan, has been brought out in parts, of which the first appeared in 1872, and the last, containing the index, in November, 1897. The whole consists of seven thick octavo volumes, comprising altogether over 5000 closely printed pages, and containing descriptions of 14,520 species."—*Nature*, July 14th, 1898.

Sm. folio, 453 ll., double columns, with hundreds of woodcuts, including 7 of full-page dimensions, which are among the most remarkable productions of German work before the time of Dürer, the red initials filled in by hand throughout; the fine Syston Park copy in olive morocco extra, gilt edges (*Hain, 8944*)

Mainz, 1491 70 0 0

The first edition with a date, and beyond all comparison the finest illustrated edition of the *Hortus Sanitatis*. It is likewise the rarest. Not only the large woodcuts, but many of the smaller ones may be regarded as effective work of *genre* drawing. There are, besides the illustrations of the herbal and the animal kingdom, woodcuts of doctors and patients, and workmen at their various labours, as well as incidental accessories in treatment which raise this book beyond the ordinary level of an illustrated work of popular science.

The colophon contains a contribution to the history of typography. After mention of Mainz, it goes on with *in which most noble city was first invented this most subtle art and science of characterising or printing.* Meydenbach is believed to have been a son of the man (similarly named) who cut the letters for the Psalter of 1457.

One of the most imposing botanical works ever produced. According to Sir Joseph Banks only 12 copies were executed. The then King of Spain being too late in his application to subscribe was unable to procure a copy, though Jacquin wrote the most pressing letter to Dr. Salichetti, the Pope's physician, asking him to relinquish his. The request was refused. Some copies have printed text although the plants are described in *Selectarum Stirpium Americanum Historia* (see No. 175). The copy offered, by reason of its inscriptions being in letters of gold, was almost certainly of more than ordinary importance. Another fine copy of which I have a description has the inscriptions in pencil only. The drawings, executed by Jacquin himself, were never engraved.

fine copy in the original half red morocco, UNCUT

Paris, 1807 140 0 0

Eighteen copies were printed on large vellum paper (see Redouté's
 pencil correction on the leaf of dedication in the above) each with the
 plates retouched by Redouté. Brunet gives the number as 20 and the
 preface 40; both are in error. These special copies, which should not
 be confused with the ordinary vellum paper copies in impl. folio, have
 each a general title to the whole work and a sub-title to each volume.
 The leaves of the above measure $24\frac{1}{2}$ in. $\times$ $18\frac{1}{2}$ in.; those of the
 ordinary copies are considerably less.

ILLUSTRATED and DESCRIBED. 4 vols. forming 2 series,
impl. folio, with 192 coloured plates; half morocco neat, fine
copy 1889-94 20 0 0
It was the aim of the authors to represent truthfully the natural
aspect of the plants, which are drawn life-size, and in addition to the
coloured illustrations scientific drawings of the structural parts of the
flowers have been given when desirable. Some of the plant-portraits
were coloured by lithography, and others hand-painted, as was found
expedient. To the detailed information respecting each plant are added
practical notes on its culture. It was the intention of the authors to
illustrate all classes of the orchid family, and species and varieties of
garden value, whether old or new, have found a place in the work.

| 303 | TRIGGS (H. Inigo). The ART of GARDEN DESIGN in ITALY. Illustrating the Planning and Arrangement, the architectural Features and Accessories of the old Italian Gardens of the best periods, with an historical Essay, and descriptive and critical Accounts of the principal Gardens in Italy. Folio, with 128 plates, and numerous illustrations in the text; buckram 1906 | 3 | 13 | 6 |
| | This work is particularly addressed to those who desire a closer knowledge of the old traditions of Italian garden design, and who would wish to transfer to other climes something of the old-world garden magic belonging to the Italian formal garden of the best period, of those gardens which were the models for so many of the delightful schemes carried out in England and other countries during the XVIth and XVIIth centuries. In order to do this they must have the means of studying and comparing the garden schemes by plan and photograph combined, and it is this combination which is the principal feature of the present work. | | | |

| | The contents of the book include a readable and orderly recital of the facts and details which furnish the basis for the mutation theory of the origin of species. All the more important phases of heredity and descent come in for clarifying treatment that renders the volume extremely readable to the amateur as well as to the trained biologist. The more reliable historical data are cited, as are the results obtained by Professor de Vries in the Botanical Garden at Amsterdam during twenty years of observation. | | | |

This sumptuous work deals with the *lepidoptera* of all that part of the continent of America north of Mexico. Knowledge of the subject since the time of Boisduval and Le Conte has nearly doubled, moreover many of the earlier descriptions are exceedingly faulty, being either too brief or carelessly written for accurate identification of species. The need for this work, therefore, is at once apparent.

Copies of the uncoloured issue are valueless comparatively.

| <p>"The Butterflies from China, Japan, and Corea (London, 1892-4), by J. H. Leech, is a most valuable work, and the set of plates, bound separately, surpasses any other of its kind. These plates display figures of cabinet specimens, both sides of the wings being shown, one pair being detached from the body and reversed in the now so prevalent manner. The drawing of these figures is excellent and the colouring particularly rich and soft. | Of late years an increasing interest has been shown in the study of the lepidoptera of the palaearctic region, and collections have become more and more numerous. However Entomologists have always had considerable difficulty in procuring the rare and costly works and the innumerable publications in which the literature on the subject is to be found. There is therefore a distinct need of a synthetic work which would unite all the information on each species and at the same time by its moderate price would be within the reach of every student. | | | |
| "It is this want which the author of the proposed work on <i>Rhopalocera Palaearctica</i> now offered to you, has endeavoured to satisfy. His intention is not only to render the work useful to the amateur for the classification of his specimens, but to give it a really scientific value by an exhaustive study of all the geographical, seasonal and accidental forms of each species. | | | |
| "Few persons have any idea of the extent to which many species vary, and how vain it is to imagine that one or two specimens can suffice to represent each species either in a collection or in an iconographic work. It is this defective knowledge which has led to so many errors in the creation of varieties and aberrations and has made synonyms so numerous and confusing. | | | |
| "The author is convinced that long and minute descriptions are absolutely insufficient to give an exact idea of the differences which distinguish contiguous forms, and that this object can only be accomplished by figures reproducing as correctly as possible the characteristic types. He proposes therefore to give special attention to the illustrations, sparing no expense to give the number of individual specimens necessary, and reproducing not only all the species but nearly all the varieties which have a real value." . . . <i>The Author's prospectus.</i> | | | |

The edition is limited to 300 numbered copies.

This work is an account of the birds collected and observed by the author on his recent travels in Tierra del Fuego. As its title denotes, it is primarily a work on birds; but it has many other sides to it, and will appeal in one, or more, or perhaps even in all its aspects, to almost every class of reader—especially to the lover of books.

Tierra del Fuego, from its remoteness and sensational interest in history and geography, has been considered worthy of being accorded a special preface of some thirty pages.

The birds and the book itself more particularly are dealt with in the introduction.

For ornithologists the chief interest will naturally centre in the Birds, which, the author states, are, he believes, the most comprehensive collection yet made in the island, including many recorded from there for the first time. Amongst these are a male and a female of the very rare and exquisitely beautiful little Magellan Plover (*Pluvianellus socialis*), only three other examples of which are known to exist in collections—one of these having been obtained by Captain P. P. King, R.N., on the *Adventure* and *Beagle* Survey, 1826-1836; another by the *Astrolabe* and *Zélée* Antarctic Expedition.

Fine hand-coloured plates by J. G. Keulemans, realistically drawn in natural pose and environment, illustrate those species which the author considers the greatest rarities and the most remarkable personalities of the birds of the island. Furthermore, the book is enhanced by landscapes from photographs illustrative of the prevailing various types of scenery, more especially as considered in relation to the haunts of birds. Other illustrations are the dedication and a carefully compiled artistically coloured map of the region.

| | The above work during its course of publication gained the highest praise in every quarter, from its combining three things of the highest importance but seldom found together—great scientific value, eminent readableness, and singular beauty of illustration. It can, in fact, be only compared with the great works of Gould and Selby, which being on so much larger a scale, from containing nearly life-size portraits of the birds themselves, are beyond the reach of most students of British ornithology, even with the aid of a great public library. | | | |

No better series of sporting illustrations exists.

This is a unique opportunity to appropriately decorate a shooting box or country house at a moderate cost. If desired I would furnish an estimate for framing the collection.

New York, 1906
- The present volume has a double aim. It is, first, a running commentary upon the rare and beautiful works, dating from the middle ages to the end of the eighteenth century, of cabinet-makers, carvers, bookbinders, silver-smiths, etc., which Mr. Talbot J. Taylor has brought together at his Long Island home. And, beyond this, it is a sketchy history of French furniture, in which the author, avoiding the dry method of the catalogue, has followed the changing social conditions in France, and has pointed out their influence upon the forms assumed at different periods by the decorative arts. This book should prove of interest to the connoisseur on the one hand, and on the other, to any who are interested in the history of French furniture, and wish, without going into the question too deeply, to gain some information in regard to it.

- For the present volume the writer has freely used the documents stored in our National Archives, those in the British Museum, etc., and also documents in private possession. The result has been the discovery of manufactories never chronicled in books on Tapestry, fuller information about those already known, and much fresh material relating to Tapestries in general. To this has been added the results of the latest research concerning Continental manufactories and Tapestries.

Warner (Keeper of MSS., British Museum) 1907 | 5 | 0 | 0 |
| These Miniatures are among the finest remains of 15th century French Art of the famous school of Tours associated with the name of Jean Fouquet. They measure about 15 inches by 11, but are divided across into three compartments, many of which are further divided from top to bottom. The number of different subjects depicted in them amounts in all to forty-six. They illustrate the opening chapters of each of the nine books of the French Version of Valerius Maximus, known as " <i>Les Fais et les Dits des Romains et des autres gens</i> ," which was begun by Simon de Hesdin for Charles V. of France in 1375 and completed by Nicolas de Gonesse for John, Duke of Berry, in 1401; and they represent with dramatic force and rare artistic merit scenes taken for the most part from Roman History. | | | |
| The reproductions in photogravure are by Emery Walker and the frontispiece in colour by William Griggs, whose names are a guarantee of their exceptional quality. The issue consists of 100 copies, and no more will be printed. | | | |

ZOOLOGY OF EGYPT

VOLUME FIRST

REPTILIA AND BATRACHIA

BY

JOHN ANDERSON, M.D., LL.D., F.R.S.

1898

100 copies were printed, of which about 30 remain.

“The first step towards the preparation of this volume was the formation of a collection of the Reptiles and Batrachians of Egypt. This was an absolute necessity, as these groups were evidently so poorly represented in the Museums of this country and in those of Europe, that it would have been impossible to have derived from them any just conception of the extent of these constituents of the Egyptian Fauna. Moreover, in Great Britain, as on the Continent, it was a rare circumstance to find a specimen with any more definite locality assigned to it than ‘Egypt,’ ‘Nubia,’ or the ‘Sudan.’

“In forming the Collection which was to serve as the basis of this volume, an endeavour was made to obtain as many specimens as possible from a diversity of accurately ascertained and registered localities, distributed over as wide an area as possible.

“While in Egypt, in 1892, I drew up a Memorandum, pointing out the lack of information that existed regarding the Fauna of the country generally, but more especially of the Mammalia, Reptilia, and Batrachia; and further, to make this circular as useful as possible, it was translated into Arabic through the courteous assistance of Colonel Sir Colin Scott Moncrieff, at that time Director of Irrigation, who also aided me in its circulation. Those who favourably replied to the Memorandum were furnished with the necessary materials for collecting, and with full instructions for the proper preservation of the specimens.

“Nearly five years were devoted to collecting, with the result that over 1500 specimens of Reptilia and Batrachia were brought together, of which more than 1400 were permanently preserved. The greater part was presented to the British Museum; another set, all but complete, was also presented to the Museum of the Egyptian Government School of Medicine in Cairo, and a few of the more important species were given to some of the Museums in Europe.”—*The Author's Preface.*

ZOOLOGY OF EGYPT

VOLUME SECOND

M A M M A L I A

BY THE LATE

JOHN ANDERSON, M.D., LL.D., F.R.S.

COMPLETED BY

W. E. DE WINTON, F.Z.S.

1902

200 copies printed

This volume on the Mammalian Fauna of Egypt completed the two sections to which the author had determined to confine his personal labours in the comprehensive scheme for a complete description of the Vertebrate Zoology of Egypt, which he contemplated should in the course of time be accomplished.

As the author had anticipated that this work on the Mammals would prove a more interesting subject to zoological students generally than his previous one on the Reptiles of Egypt, of which only 100 copies were printed, he had himself arranged for a larger edition being issued of the present work. In accordance with this wish, the responsibility of a larger edition (200 copies) was incurred, of which about 185 copies were for sale.

VOLUMES THREE AND FOUR

THE FISHES OF THE NILE

BY

G. A. BOULENGER, F.R.S.

300 COPIES HAVE BEEN PRINTED, OF WHICH 250

"The Survey of the Fishes of the Nile, the results of which are embodied in this work, was undertaken by the Egyptian Government in response to an appeal addressed in January 1899 to the Earl of Cromer by the late Dr. John Anderson, supported by Lord Lister, as President of the Royal Society, Dr. A. Günther, as President of the Linnean Society, Prof. E. Ray Lankester, as Director of the Natural History Departments of the British Museum, and Dr. P. L. Sclater, as Secretary of the Zoological Society.

"As pointed out by Dr. Anderson, our knowledge of the Fishes of the Nile was then very imperfect, and as a Survey of the Congo Fishes had been undertaken by the Government of the Congo Free State and was in progress, the study of the results of which had been entrusted to me, the time seemed opportune for the undertaking which has resulted in the present work; the two Surveys, it was thought, would naturally benefit each other, the materials afforded by the one throwing light upon those of the other, many of the species of the two great rivers being closely allied, a few even identical.

"Dr. Anderson's request received the approval of the Egyptian Government, the necessary funds were granted, Mr. Leonard Loat was appointed to superintend and carry out, during three years, the formation of a large collection of the Nile Fishes under the supervision of Dr. Keatinge, Director of the Government Medical School at Cairo, and I was entrusted with the task of preparing a book which should form part of Dr. Anderson's *Zoology of Egypt*, of which a volume on the Reptiles had already been published and a second volume, on the Mammals, was then in preparation and has since appeared. The Trustees of the British Museum consented to provide the necessary collecting material.

"I would have been greatly hampered in my work had I not been able to institute a direct comparison of the Fishes of the Nile with those of the other water-systems with which they are identical or nearly related. In this respect also I have been fortunate, as, in addition to the material previously existing in the British Museum, large collections have been at my disposal from the Congo, entrusted to me by the Governor of the Congo State, from the Niger, principally through the exertions of Dr. W. J. Ansorge, Mr. H. L. Norton Traill (formerly Norton Smith), and the late Mr. J. S. Budgett, from the Gambia, through the last-named, from the Senegal, thanks to an expedition undertaken for the purpose by the late M. P. Delhez, with aid from the Government Grant of the Royal Society, from Lake Chad and the Shari River, through the late Capt. G. B. Gosling. Shortly before the conclusion of my work, Mr. W. N. McMillan has sent to the British Museum a large and valuable collection made by Mr. P. C. Zaphiro in Gallaland and Southern Ethiopia, supplementing smaller series entrusted to me for study by Mr. Oscar Neumann, the late Baron Carlo von Erlanger, and Baron Maurice de Rothschild.

"The importance of this material, which, so far as the Nile species are concerned, is enumerated in this volume, will be realized from the fact that the 192 species dealt with are described from 14,107 examples, 11,068 of which form part of Mr. Loat's collection. This enormous increase accounts for the delay which has taken place in the issue of this work, which I first expected would require barely four years to prepare, whilst it has taken seven. As it was nearing completion much material kept falling into my hands, material of the greatest importance which could not well have been left out, and owing to which publication had to be deferred."—*The Author's Preface.*

Riviera Nature Notes

A POPULAR ACCOUNT OF THE MORE CONSPICUOUS

Plants and Animals of the Riviera and the Maritime Alps

SECOND EDITION

"The author of these delightful notes does not disclose his name. But there is abundance of internal evidence to show that it must be known to many who love the Riviera. Some of the more gifted of these have helped him in his good work. A vast company of others will, we predict, bless their anonymous benefactor. He has done them the inestimable service of teaching them to see. *J'observe et je suis la Nature ; C'est mon secret pour être heureux.* Borrowing his motto from Florian, he invites and almost compels the casual visitor to enter into the realm of bliss. For he is the most seductive of guides. He has spent twelve summers in the mountains and villages of the Maritime Alps, and, as he tells the story of the trees and flowers, the rocks and soils, the beetles and the butterflies, he seems to beckon away the loungers of the promenades and casinos to the higher joys. Above all things, he is human and catholic in his sympathies. That he is an Irishman he is almost at pains to proclaim ; but he might safely have left the question of his nationality to the judgment of the percipient reader. He has his antipathies as well as his enthusiasms, and is never so palpably good-humoured as when he is railing at some pet aversion or crushing his favourite form of Philistine or Prig. His handsome volume is embellished with a number—we must adopt his own outspoken eulogy—of 'excellent illustrations of mountain scenery from the magnificent collection' of his friend Mr. Duddell, and some beautiful pictures of coast views and vegetation of the littoral zone, contributed by Miss E. Wilmott. These are only a few of his collaborateurs ; yet, when all is said, it is the text, with its felicitous blending of a gossiping, almost rollicking, style, and the faithful revelation of the results of exact and loving observation, that constitutes the charm. His method can be best indicated by examples. The author takes each natural object in succession as the subject of a little monograph, in which are combined all sorts of light from science and history, and observation, humorous and philosophic, of life. The Riviera becomes a little mirror of the universe, and the history of ancient days is invoked to illustrate the afternoon walk."—*Standard*, February 9th, 1904.

SEVENTH EDITION, ENLARGED AND REVISED TO THE PRESENT TIME

BY

HENRY WILLIAMS, F.L.S., F.R.H.S.
Author of "The Orchid Album"

This standard book is the largest as well as the best scientific manual of the orchid family.

"When a work has been before the public for upwards of forty years, and has found so much favour that new editions have been called for at comparatively short intervals throughout the whole period, it is not necessary to say much with regard to either its plan or merits. The continuous demand is a sufficient indication that the great body of orchidists are well acquainted with its distinctive features, and fully appreciate the profound knowledge and the great judgment that have been evinced in the preparation of the successive editions. The work contains full directions for collecting and cultivating orchids, the erection and management of orchid houses, the diseases of orchids and the various insect pests that prey upon them. Indeed, every detail necessary to their successful cultivation is described with sufficient fulness and in a manner that even those who have but little practical knowledge may readily understand them. The original plan is followed in dealing with the several genera, and in the case of each genus the distinctive characteristics are pointed out, cultural directions given, and the species, with the exception of mere botanical curiosities, are described, the description being full enough to admit of their identification, and in many cases the letterpress is accompanied by excellent woodcuts. In addition the place of origin in the case of species, the parentage of hybrids, and references to figures in botanical and horticultural periodicals are given. In congratulating Mr. H. Williams upon the success he has achieved in the preparation of the seventh edition of this valuable work, we would state that its completeness, practical character and scientific accuracy render it absolutely indispensable both to the amateur and practical orchidist, and that the young gardener who adds it to his stock of books and makes himself master of its contents will find it one of the most profitable investments he could make."—*The Gardeners' Magazine*.

"When a book has reached its seventh edition there is little need to say anything in its favour, and that is the proud position in which the modest little 'Orchid-Growers' Manual' of 1852 now finds itself—a handsome volume of nearly 800 pages in super-royal octavo, with over 300 illustrations. The contents of the work are well known, and as the present edition is brought down to date by the addition of the numerous novelties which have appeared during the last nine years, it forms a thoroughly reliable volume for the orchid grower of the present day. The cultural directions given are sound and practical, in fact the 'Orchid-Growers' Manual' has been one of the most potent factors in the extension of orchid culture, and in its present form will prove as useful as ever."—*The Orchid Review*.

"The 'Orchid-Growers' Manual,' the excellent treatise of Mr. Williams, has just published its seventh edition, handsomely and luxuriously got up. The work is written in English by a connoisseur of orchids."—*Lindenia*

BUTTERFLIES

FROM

CHINA, JAPAN AND KOREA

BY
JOHN HENRY LEECH

"The *Butterflies from China, Japan, and Corea* (London, 1892-4), by J. H. Leech, is a most valuable work, and the set of plates, bound separately, surpasses any other of its kind. These plates display figures of cabinet specimens, both sides of the wings being shown, one pair being detached from the body and reversed in the now so prevalent manner. The drawing of these figures is excellent and the colouring particularly rich and soft. It is a true delight to examine these beautiful lithographs".—*Alfred Sich, The Entomologist's Record*, vol. xiii, no. 2, 1901.

COLOURED FIGURES OF THE EGGS OF BRITISH BIRDS

WITH DESCRIPTIVE NOTICES

BY

HENRY SEEBOHM

Author of "Siberia in Europe," "Siberia in Asia," "A History of British Birds," "Catalogue of the Birds in the British Museum" (vol. 5), "The Geographical Distribution of the Family Charadriidae," "Classification of Birds," "The Birds of the Japanese Empire," etc., etc.

EDITED BY

R. BOWDLER SHARPE, LL.D.

The books which have been written on British birds, from the first edition of Bewick in 1797, down to Saunders's Manual in 1889, are legion, but in very few of them are the eggs of British birds illustrated.

The first edition of Hewitson's British Oology was begun in 1831, and the last was finished in 1856. The plates were coloured by hand, and are most of them good; but all three editions have long been out of print, and, indeed, much of the letterpress is out of date.

There are a few inexpensive books on the eggs of British birds, but they contain only figures of the eggs of birds which breed within the British Islands, and these by no means satisfy the wants of the egg collector.

For one who is interested in birds there are a hundred persons who are interested in eggs. What the egg collector wants is a work in one volume, at a moderate price, with coloured illustrations of the egg of every British bird. The egg collector of to-day is very exacting. To satisfy him the chromos must be as good as love and money can make them. The letterpress, too, must be up to date in every respect, and, withal, not bulky. Into less than a page devoted to each of the 400 British birds must be condensed the following facts:—

1. The extent of the breeding range.
2. The date of the nesting season.
3. The situation in which the nest is placed.
4. The size and shape of the nest, and the materials of which it is composed.
5. The number of the eggs.
6. The variations of size and colour of the eggs.
7. The way to distinguish them from the eggs which resemble them most closely.

Seebohm's book fulfils all these requirements.

THE BRITISH MOSS-FLORA

BY

R. BRAITHWAITE, M.D., F.L.S., etc.

[1880]—1905

“We offer Dr. Braithwaite our most sincere congratulations on the completion of this work on his favourite class of plants. Begun, as regards publication, in 1880, it reached completion by the issue of the last part with index and supplement in May of this year, so that the course of publication has occupied a space of some quarter of a century. . . .

“The three volumes of Dr. Braithwaite’s book are illustrated by 128 pages of plates, giving figures of every moss described, with enlarged designs of parts of the various species. Every one of these plates has been engraved from the drawings of the author himself, and together constitute a remarkable monument of his skill and industry. Indeed, the illustrations may be regarded as perhaps the most distinctive feature of the work. In some cases a whole page is devoted to a single species, as *Schistostega*, or to two species, as in the strange genus *Buxbaumia*; but generally four or more plants are dealt with in a single plate. So far as we have compared the figures of our author with nature, we have found his drawings accurate, and the magnified parts very valuable for the purposes of identification. . . .

“Mr. Dixon, in his preface to his ‘Student’s Handbook of British Mosses’ (1896), referred to the book now under review as ‘Braithwaite’s splendid and elaborate work . . . which has done so much to stimulate the study of these plants in our country and which will doubtless remain our standard work for many years to come.’ In this generous appreciation by one botanist of the work of another, we cordially agree, and we rejoice for ourselves, as well as for the author, at the completion of a noble piece of honest work.” . . . *Nature*, Aug. 31st, 1905.

AUTHORS' PROSPECTUS

OUR experience in the publication of previous works has convinced us that such a work could not be properly produced except under the constant personal supervision of the authors, and in consequence we have decided to publish it privately.

Having now given five years to its preparation, we have reached a point at which we can say that the completion of our work is assured, and that we expect to finish it in five volumes, each containing about 200 pages of letterpress and 60 illustrations.

The remaining two volumes we expect to have ready at intervals of six months.

The total cost of the work is fixed at £21.

Price of each Volume, £4. 4s. net

No volume will be issued except to subscribers to the whole work, but subscribers may pay for each volume as it appears.

The edition is limited to 500 copies, and a large demand practically assured.

THIS book contains 117 pages and 45 coloured plates, descriptive of 81 species hitherto undescribed or figured, mostly from Bolivia. The plates cover all species described and represent the limit of perfection in lithographic art, being considered equal, or superior, to any previous productions.

BRITISH MUSEUM, LONDON, November 25th, 1901. "I hope you will continue this superb work."
CHAS. O. WATERHOUSE.

LONDON, ONTARIO, August 10th, 1901. "The plates of your butterflies are exquisite and compare most favourably with those in W. H. Edwards's work, which can hardly be excelled."
REV. C. J. S. BETHUNE.

BOSTON, September 5th, 1901. "Your plates are the most perfect I ever saw, both as regards delicacy of drawing and colour."
PROF. W. S. ALLEN.

BOSTON, August 16th, 1901. "The plates are exquisite and the whole work will make a notable addition to Entomological Literature."
H. H. NEWCOMB.

MONTREAL, October 24th, 1901. "You deserve the sincere gratitude of the Entomological World for the great service you are doing for Lepidopterists. The work is superb in every way."
CHARLES STEVENSON.

SUPPLEMENT TO LÉON PAGÈS' BIBLIOGRAPHIE JAPONAISE

COMPILED BY

Added is a List of the Swedish Literature on Japan by
Miss VALFRID PALMGREN, Ph.D.

"The Bibliography before us leaves no further excuse for ignorance on the subject (viz., Japan). It affords the most convincing proof that there is not a single feature of Japanese life, individual or national, that has not been discussed by a number of writers, and we must render the author the tribute of our unqualified admiration of the extensive knowledge and tireless energy he has brought to his task. . . . We strongly recommend Embassies, Legations and Consulates General, Foreign Offices, Foreign Chambers of Commerce, Libraries, Clubs and other public institutions, as well as newspaper offices and public writers, therefore to purchase a copy of this excellent work, of which, we hope, a sufficient number of copies has been printed to meet the demand it is sure to have."—*The Eastern World*, August 17th, 1907.

"Not the least useful of the contents will be found the indexes, especially the first one, containing periodical publications in foreign languages of the Imperial, Local and Municipal Government and Public Corporations. Many of these are not obtainable through the ordinary channels of book trade, and the clearly arranged list will enable the student to find many reports the existence of which might otherwise remain unknown to him."—*Japan Chronicle*, August 21st, 1907.

"It is evident that nobody interested in Japanese history, literature, or civilization can fail to supply himself with a copy of this most useful compilation. It is like a catalogue raisonné of a great collection, and we offer the author our sincere homage for the extraordinary energy and self-sacrifice he has displayed in compiling such a work."—*Japan Mail*, August 21st, 1907.

"That the compiler has admirably fulfilled his self-appointed task nobody will feel disposed to deny after examination of this work, which deserves a place in the library of every student of Japanese affairs."—*Japan Advertiser*, August 16th, 1907.

"The volume shows unmistakable signs of enormous energy, exceptional intelligence and perseverance, and attention to the minutest details. . . . Such a publication is the result of pure altruism, for the proceeds barely pay expenses. It is indeed a labour of love, the reward of which is not material, but intellectual."—*Yamato Shinbun*, September 9th, 1907.

THE BIRDS OF TIERRA DEL FUEGO

BY

RICHARD CRAWSHAY

CAPTAIN

Reserve of Officers: late Inniskilling Dragoons

THIS work is an account of the Birds collected and observed by the author on his recent travels in Tierra del Fuego. As its title denotes, it is primarily a work on Birds; but it has many other sides to it, and will appeal in one, or more, or perhaps even in all its aspects, to almost every class of reader—especially to the lover of books.

Tierra del Fuego, from its remoteness and sensational interest in history and geography, has been considered worthy of being accorded a special preface of some thirty pages.

The birds and the book itself more particularly are dealt with in the introduction.

For ornithologists the chief interest will naturally centre in the birds, which, the author states, are, he believes, the most comprehensive collection yet made in the island, including many recorded from there for the first time. Amongst these are a male and a female of the very rare and exquisitely beautiful little Magellan Plover (*Pluvialis sociabilis*), only three other examples of which are known to exist in collections—one of these having been obtained by Captain P. P. King, R.N., on the "Adventure" and "Beagle" Survey, 1826-1836; another by the "Astrolabe" and "Zélée" Antarctic Expedition.

Fine hand-coloured plates by J. G. Keulemans, realistically drawn in natural pose and environment, illustrate those species which the author considers the greatest rarities and the most remarkable personalities of the birds of the island. Furthermore, the book is enhanced by landscapes from photographs illustrative of the prevailing various types of scenery, more especially as considered in relation to the haunts of birds. Other illustrations are the dedication, and a carefully compiled artistically coloured map of the region.
